

Share Newly Discovered Places of City

Overview

Our client wanted us to develop a mobile application that will allow users to share knowledge of city by sharing discoveries on this app. This app lets user discover newly opened or unexplored food joints, travel spots, musical concerts, theaters and much more.

Technology : Android

Challenges

- Ensure low memory consumption in order to ensure faster processing speed for better user experience while navigating in the application.
- Design UI / UX for Business gallery was a challenging task to enable all the images except main image to view post of the device, with a perspective of not compromising on application's faster processing and uploading speed.

Hidden Brains Solutions

- Business owner can create account and post business detail along with photographs
- Filter places/feeds based on different criteria like location/category
- Developed a module of notification to provide alerts to users for all events posted by business owners
- Post Feeds (Events) /Place details like description and photos from account
- View Feeds /Places person has posted as per location preference
- Comment, Like, and bookmark place/feed
- Follow a person to receive notification of new post

Technology : Android

Hidden Brains Approach

- One interface to register all delegates. Assign delegates to a stall if they want to participate as team member
- Provide a portable system which can be operated by delegates from mobile/laptop/pc
- One-rating system for a stall member to rate delegates
- Display ranking of delegates
- Suggested an interface with connectivity to the projector in order to display best stall in event and ranking of delegates to all users whether they are using system or not
