

## All-in-One Organizer App

## Overview

Our client from Australia wanted us to develop an iOS app that will allow users to store personal information in an electronic diary. This app will be an all-in-one organizer that will store confidential information in a private and secure manner.

**Technology : iOS**

# CORE ORGANIZER

## Challenges

- Implement sync feature using Cognito and Amazon S3 in the existing system structure
- Multiple languages support
- Provide offline support

## Hidden Brains Approach

- Create user friendly interface to easily manage information in different modules House, Finances, Sporting Events, Hobbies, Travel Itinerary, Films, Music, Books, Health Documents and Information
- Improved code for data migration and synching that allows a user to access recorded data across multiple devices
- Encryption support made available from Amazon S3 cloud service

## Hidden Brains Solutions

- Multiple categories/Modules to manage all personal information in one single app
- Email and password protected
- Multilingual support
- Offline app & online syncing with AWS Cognito
- Amazon S3 technology to sync info/multiple devices
- Cloud storage
- Create and manage groups within app
- Device default calendar to manage and organize events
